Aadam Gandhi

Backend Engineer @TCS | Java · Spring Boot · Node.js · Kafka |
AWS Certified Developer - Associate | Building Scalable, Event-
Driven Systems
India

Summary

I'm a software engineer with hands-on experience building backend-heavy, production-grade systems focused on scalability, performance, and reliability. My work spans designing RESTful APIs, async processing, Kafka-based messaging, authentication, rate limiting, and role-based access control (RBAC) in real-world applications.

I've worked extensively with Java, Node.js (NestJS), databases, and event-driven architectures, contributing to core product features rather than just surface-level tasks. I enjoy solving system design and performance bottlenecks, whether it's optimizing API throughput, handling high-concurrency workloads, or structuring clean, maintainable backend code.

Alongside backend engineering, I have working knowledge of frontend development with React, enabling me to think end-to-end while building products. I actively sharpen my problem-solving skills through data structures, algorithms, and real, debugging-driven scenarios.

I'm curious by nature, pragmatic in execution, and driven by impact. My long-term goal is to grow as a strong full-stack engineer with deep backend expertise and contribute to building scalable products that actually matter.

Experience

Tata Consultancy Services
Backend Engineer
January 2025 - Present (1 year 9 months)

- |

- Engineered REST APIs for Circuit, an internal API orchestration platform where users define, compose, and execute complex multi-step workflows with custom JavaScript logic across backend services.
- Architected a data compression and storage strategy across distributed components, reducing database footprint by 70%+ and improving read/write performance for large-scale JSON payloads.
- Designed and implemented a scalable RBAC system (owner/admin/editor/viewer) with strict backend enforcement covering all permission boundaries.
- Performed a code revamp using worker threads and in-memory caching to offload CPU-intensive workflow execution, reducing overall platform execution time by 40%.
- Built event-driven workflow execution using Kafka with configurable per-user rate limiting, improving throughput across multi-tenant API workflows.
- Developed Circuit-OM, an order management backend service in Java and Spring Boot, consuming Kafka events to process user orders within defined SLA windows with fault-tolerant retry logic.
- Set up observability using Instana for infrastructure monitoring and Grafana dashboards; structured application logs mounted to server paths for centralised aggregation.
- Leveraged AI-assisted development tools (GitHub Copilot, LLMs) to accelerate code generation, debugging, and documentation across the engineering workflow.
- Collaborated with DevOps on CI/CD pipelines using Docker and Kubernetes, enabling reliable deployments across multiple environments.

Jouls

Web Development Intern

September 2023 - December 2023 (4 months)

- Delivered REST APIs for mobile integration, improving cross-platform functionality and reducing integration time.
- Executed performance audits across the service stack, identifying bottlenecks and accelerating development workflows.

Ciright Enterprise (Ciright India)

Java development Intern

July 2023 - September 2023 (3 months)

Ahmedabad

- Built and enhanced application modules using Java, Spring Boot, Hibernate, and MySQL; authored functional and integration tests to validate data integrity.
- Diagnosed and resolved production performance bottlenecks, boosting application speed and responsiveness by 30%.
- Designed MySQL schemas and crafted SQL queries to maintain seamless data pipeline integration between application layers.

HACK-X Club MITWPU

Member

September 2022 - September 2023 (1 year 1 month)

Pune, Maharashtra, India

Education

MIT World Peace University

Bachelor of Technology - BTech, Computer Science · (August 2020 - July 2024)
